

Company Profile

Leading AI. Delivered.

AI solutions, secure implementation and infrastructure coordination for organisations moving from fragmented AI activity into production.

PUBLIC EDITION

Prepared for public distribution
Main Shofield Group, Inc.
August 2026

Shofield AI at a glance

A partner-led, AI-native company designed to commercialise and implement leading technologies without claiming to manufacture every underlying component.

LEGAL OPERATOR

Main Shofield Group, Inc.

Delaware, United States

OPERATING BRAND

Shofield AI

AI solutions and infrastructure

CUSTOMER PROMISE

Production AI

Secure, integrated and measurable

PRIMARY AUDIENCE

AI-active organisations

Mid-market and enterprise

DELIVERY SYSTEM

Five defined stages

Assess to operate

PUBLIC CONTACT

shofield.ai

info@shofield.ai

AI activity is growing. Production discipline is not.

Shofield is built for organisations that already have licences, pilots or isolated automations but lack one accountable route into production.

01

Fragmented pilots

Experiments remain disconnected from shared workflows and systems.

02

Vendor confusion

Models, platforms and licences accumulate without coherent architecture.

03

Data barriers

Critical information is distributed across enterprise and legacy systems.

04

Security exposure

Permissions, auditability and operating ownership remain unclear.

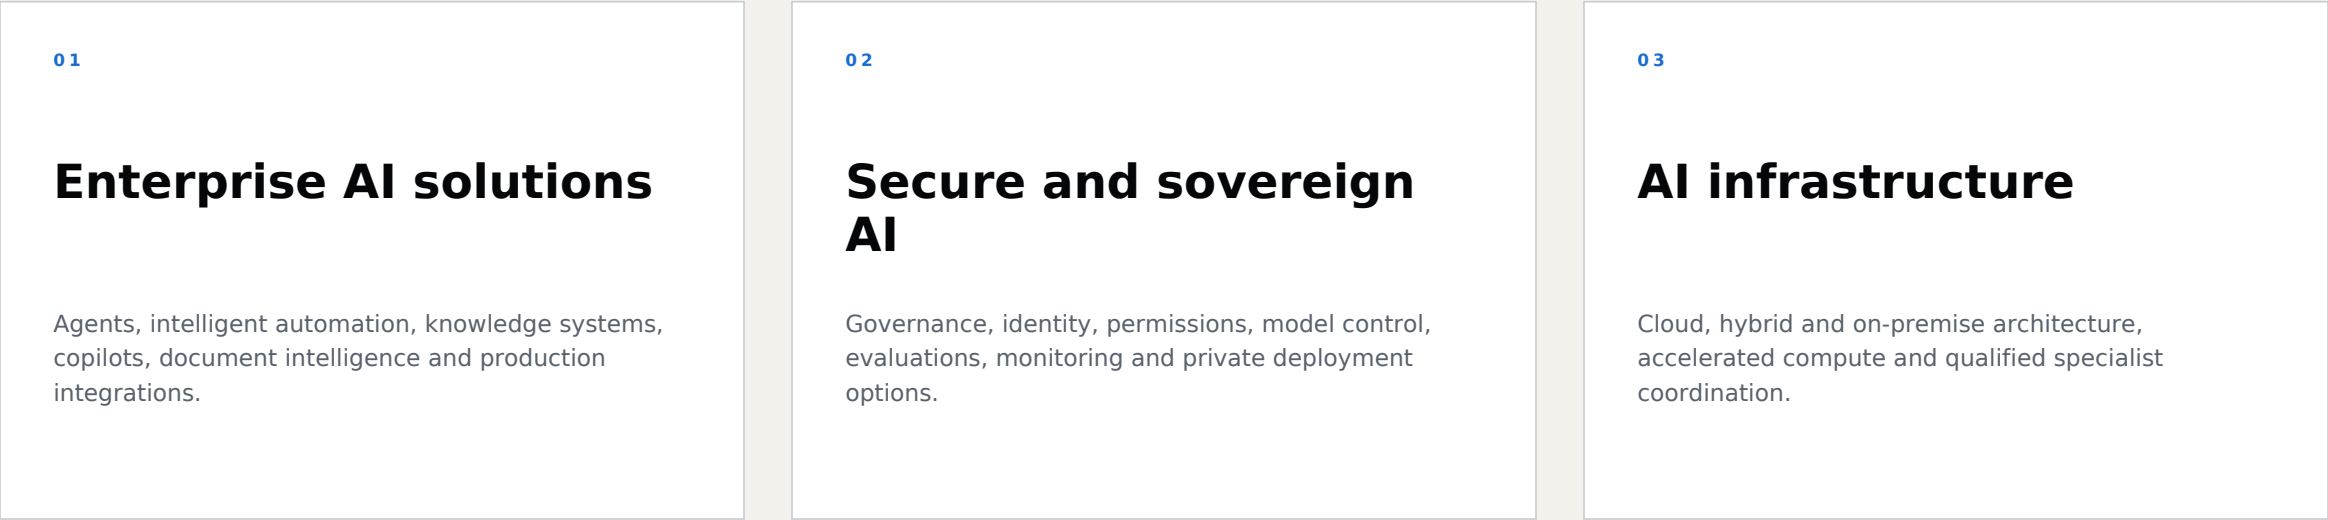

05

Unclear economics

AI activity is not connected to a measurable operating result.

One partner across systems, controls and infrastructure.

Shofield connects business architecture, technology selection, implementation coordination and managed operation around a defined production objective.

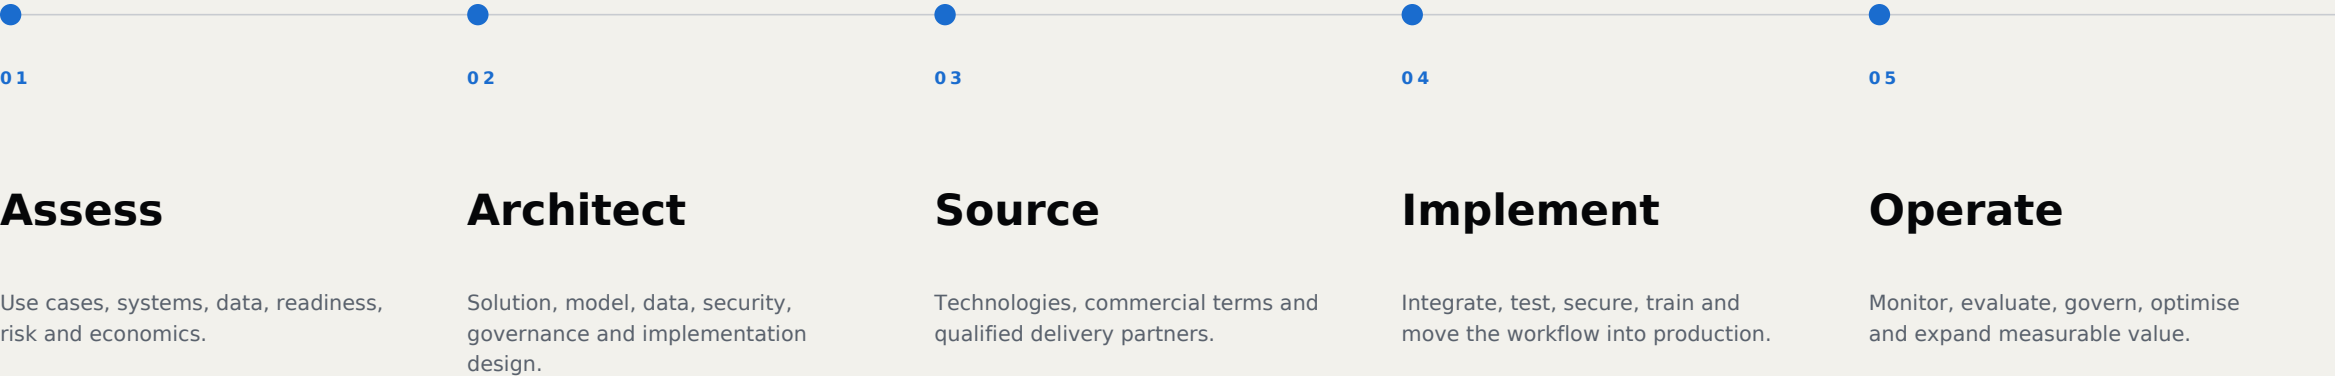

DELIVERY BOUNDARY

Shofield leads discovery, architecture and solution coordination. Specialist engineering, construction and deep product delivery remain with qualified partners where required.

Assess. Architect. Source. Implement. Operate.

A repeatable sequence creates a decision point at every stage and protects both customer outcomes and delivery discipline.

COMMERCIAL PRINCIPLE

Paid assessment before complex design. Defined scope before delivery. Human approval before material commitments.

Secure AI Deployment Assessment

A paid first engagement for organisations that have AI activity but need a secure, practical and economically grounded production decision.

01 **Current-state map**

Workflow, systems, AI usage, data dependencies and constraints.

02 **Architecture and controls**

Integrations, access, approvals, audit requirements and risk controls.

03 **Economic model**

Baseline, value hypothesis, costs, assumptions, sensitivities and success measures.

04 **Production plan**

Prioritised workflow, accountable owners, vendor roles and next paid step.

DECISION GATE

Go / no-go

Documented owners, architecture, economics, principal risks and the next implementation decision.

Production AI requires accountable controls.

Controls are designed to match the workflow, data and consequence level. This is an operating principle, not a claim of external certification.

01 **Security by design**

Identity, permissions, integrations and data handling are considered during architecture.

02 **Human approval**

Material commitments and consequential actions retain explicit decision authority.

03 **Evaluation**

Quality, failure modes, cost, latency and operating measures are defined before scale.

04 **Operational evidence**

Logs, monitoring, ownership and escalation routes support accountable use.

05 **Vendor discipline**

Technology is selected for fit, delivery maturity, commercial viability and risk.

06 **Defined boundaries**

Specialist or regulated work remains with appropriately qualified providers.

Accountable orchestration with specialist depth.

Shofield owns the commercial and architectural path while qualified specialists provide the disciplines an engagement requires.

SHOFIELD LEADS

- Discovery and qualification
- Use-case and business architecture
- Technology and partner coordination
- Implementation governance
- Managed operating cadence

QUALIFIED SPECIALISTS

- Deep product engineering
- Cybersecurity implementation
- Infrastructure engineering
- Construction and facilities
- Regulated professional services

CUSTOMER OWNERS

- Economic decision
- Technical ownership
- Operational ownership
- Risk acceptance
- Adoption and change

International brand. Controlled market roles.

Regional focus describes commercial intent and delivery strategy. It does not imply a customer base, partner designation or physical office in every market.

United States

Technology partnerships and selected opportunities.

Europe / Benelux

Primary commercial focus for governed production AI.

Middle East

Strategic enterprise, government and partner opportunities.

Selected African markets

Country-specific, partner-led opportunities.

FROM AI AMBITION TO A FUNDABLE DECISION

Start with one workflow worth deploying.

Bring the initiative, sponsor and operating problem. Shofield will help define the evidence required for a secure go / no-go decision.
